

## Welcome to Bootstrap: Week 3!

In Week 3, you will learn about using Bootstrap components that use both CSS and JavaScript for their functionality, such as Modals, Tooltips, and more. You will also begin to review fundamental JavaScript concepts this week, such as data types and operators.

### To Do This Week:

- \* [Watch the Week 3 lectures and do the exercises](#): Set aside at least 2 hours every day to learn and perform the exercises.
- \* **Ask and answer questions on Slack**: I and other Instructors will monitor it and jump in to help when needed.
- \* **Reach out directly to me if you're stuck**. Use the messaging feature of the course website. Don't forget the 20-minute rule though: You should work on figuring out the solution on your own for 20 minutes before asking for help.
- \* Construct a wireframe for your Bootstrap Portfolio Project. You will find useful links about creating wireframes in the learning portal.
- \* **Read and internalize the [Workshop Instructions](#)** – Watch the video and read the instructions thoroughly at least once. It is recommended to bring a printed copy with you to the Workshop.

Happy learning!
