Welcome to Bootstrap: Week 2!

In Week 2, you will begin learning about Bootstrap's CSS-based components, including Forms, Cards, Tables, and more. You will also learn about a couple sets of utility classes for spacing and color.

Watch all the videos and do the exercises by the time we meet for the in-person workshop to work together on the Week 2 assignment.

- **Watch the Week 2 lectures and do the exercises**: Set aside at least 2 hours every day to learn and perform the exercises.

- **Ask and answer questions on Slack:** I and other Instructors will monitor it and jump in to help when needed.

- **Reach out directly to me if you're stuck**. Use the messaging feature of the course website. Don't forget the 20-minute rule though: You should work on figuring out the solution on your own for 20 minutes before asking for help.

- **Read and internalize the Workshop Instructions** – Watch the video and read the instructions thoroughly at least once. It is recommended to bring a printed copy with you to the Workshop.

Happy learning!
